

Gen. M. C. Murphy
CHICAGO, ILLINOIS
SIXTEENTH ANNUAL REPORT

OF THE

DEPARTMENT OF

PUBLIC WORKS

OF THE

CITY OF BUFFALO, N. Y.

FOR THE

FISCAL YEAR ENDING JUNE 30, 1908.

THIRTY-NINTH ANNUAL REPORT

OF THE

BUREAU OF WATER

DEPARTMENT OF PUBLIC WORKS

CITY OF BUFFALO

JULY 1ST, 1907, TO JUNE 30TH, 1908.

OFFICERS OF THE BUREAU OF WATER.

FRANCIS G. WARD,

Commissioner of Public Works.

HENRY L. LYON,

Deputy Water Commissioner.

RICHARD L. KIRTLAND,

Registrar.

JAMES B. CLOUDSLEY,

Chief Engineer of Steam Power.

JOHN H. SHIFFERENS,

General Foreman of Repairs.

CHARLES E. RICHARDSON,

General Foreman of Extensions.

FIRST WATER WORKS—CITY OF BUFFALO.

The Buffalo and Black Rock Jubilee Water Works Company was incorporated in 1827 with a capital stock of \$20,000.00. Up to the year 1832 the company had laid about sixteen miles of wooden water conduits. The supply was drawn from the Jubilee Springs, situated near Delaware Avenue about one hundred rods North of Ferry Street from which high ground the water flowed by gravity through the pipes.

Black Rock and the northern part of the City were first supplied and subsequently the pipes were laid down Main Street to the southern part of the City. The officers of this company for 1832 were:

Peter B. Porter—President,
Donald Fraser, S. C. Brewster, Peter B. Porter—Directors,
Absalom Bull—Secretary and Treasurer,
Donald Fraser—Superintendent.

Property Jubilee Water Company purchased by the Village of Black Rock July 1st, 1850, absorbed by incorporation within the limits of the City of Buffalo in 1854, and placed under the control of three commissioners, known as the Jubilee Water Commissioners. The supplying of water has long since been discontinued by reason of the introduction of the regular City service. The property now consists of the two lots on Delaware Avenue and one at the corner of Amherst and Grant Streets.

The act incorporating the Buffalo City Water Works Company was passed by the Legislature March 15th, 1849, the incorporators being George Coit, Walter Joy, William A. Bird, Orlando Allen, Horatio Shumway, George R. Babcock, Isaac Sherman, Cyrenins Bristol, Oliver G. Steele, Thomas W. Foote, William Bucknedd, Jr., Henry W. Rogers, William Coffin and Aaron D. Patchen.

The capital stock of the company was \$200,000.00 with authority to increase it to \$500,000.00. The meeting for formal organization was held February 7th, 1850. On the 11th of March that year the Common Council adopted a resolution by the terms of which the City was to become a subscriber to the company's stock to the amount of \$100,000.00. No action was taken under this resolution. During the year 1850 the rela-

tive desirability of different sources of supply was discussed; the contract for erecting the works was let to Battin, Dungan & Company of Philadelphia and Newark, N. J., who became large subscribers to the stock, and Wm. J. McAlpine, a distinguished engineer, was employed to investigate sources of supply, etc.

He favored the plan finally adopted of pumping from the river, with a reservoir situated on Prospect Hill. Lots 29 and 30 were purchased for a site for the works and Lot 145 for the reservoir. The contract price was \$375,000.00. Work on the shaft and tunnel (No. 1) was commenced July 29th, 1850, on the reservoir, August 12th, and on the pumping station, September 12. The reservoir was completed in November 1851 and on December 31st, 1851, connected with the mains. Pumping began December 19th, 1851. On January 2nd, 1852 service was established through the City and A. R. Ketcham was appointed Superintendent and continued as such until 1874.

OFFICERS.

PRESIDENTS—

Henry W. Rogers.....	1850-1854
Albert H. Tracy.....	1855-1859
Henry W. Rogers.....	1860-1868

Under an act of May 7th, 1868 authorizing the City of Buffalo to issue bonds for \$1,500,000.00 for the purchase of the property by the City, the purchase of the entire plant of the company was consummated August 15th, 1868 for the sum of \$705,000.00, the first Board of Water Commissioners being Henry W. Rogers, Chandler J. Wells and James Ryan.

Mr. Ketcham served as Superintendent until 1874 when George Hosley was appointed. He was succeeded by Mr. Ketcham in 1880, who was followed on March 1st, 1882 by Louis H. Knapp.

In 1892 the Water Commission was superceded by the Department of Public Works, Bureau of Water and Peter Drexilius appointed as Superintendent was succeeded by Col. Francis G. Ward in 1896 and Frank J. Illig in 1899. On the re-organization of the Department of Public Works in 1901 Col. Francis G. Ward was elected Commissioner and Henry L. Lyon was appointed as Deputy Water Commissioner January 1st, 1902.

BUREAU OF WATER.

MUNICIPAL BUILDING.

BUFFALO, N. Y., JULY 1ST, 1908.

To the Honorable, the Commissioner of Public Works:

DEAR SIR:—I respectfully submit the thirty-ninth annual report of the Bureau of Water of the City of Buffalo, for the year ending June 30th, 1908.

This has been a very active year in this Bureau. The re-building of the present pumping station has progressed very materially. The time for finishing of this improvement is delayed by the fact that the changes and improvements in machinery must coincide with the changes in the building. Electric Pump No. 2 was installed and put in operation about January 1st, 1908. Old Pump No. 5 was abandoned, sold and removed, and the work of excavating for the foundation of new Steam Pump No. 1, and the extension of the wells to supply it with water are begun. This is all a blasting of hard limestone in the building and around the other engines, so it is necessarily a little slow, care being taken to use very small charges in blasting. We hope, however, by January 1st, 1909, to have this pump in operation.

We have begun the work of laying the 36-inch water main from Kensington to the Pumping Station. We have laid 12,850 feet of this pipe, and prepared the foundation for the tank and water tower at the corner of Kensington Avenue and Grider Street. This main is laid, through a large part of the distance, in rock, and the work has been slow and expensive

on that account. We expect, however, to have it completed in time to connect with Electric Pump No. 3, when it is ready to operate.

We have made fair progress with the new tunnel under contract to the Buffalo Dredging Co. This tunnel will be 12 feet in diameter and 6,600 feet in length, from the shaft at Porter Avenue to the new intake in Emerald Channel, and 9 feet in diameter and 4,200 feet in length, from the present Pumping Station to the shaft at Porter Avenue. We have excavated 810 feet of the 12-foot tunnel, and 2,914 feet of the 9-foot tunnel. We have also begun the work on the concrete foundation for the new Porter Avenue Pumping Station, together with the canals or wells, and the foundations for the boilers and engines. The concrete dock in front of the Porter Avenue Pumping Station and along the new established harbor line, is also nearly completed between the north line of Porter Avenue and the south line of Jersey Street, and a pile pier constructed along the south line of Jersey Street, from the harbor line to the shore line.

The steel shield to surround the new intake pier is all finished and ready to launch, when it will be towed to its location in Lake Erie, near the Dummy Light, and set on its foundation, which is all prepared for it. This shield is 110 feet in diameter and 30 feet in height. In the center is another steel ring, 70 feet in diameter. These rings are connected by 24 ports for the entrance of the water to the shaft of the tunnel. When placed, the space between these steel rings will be filled with concrete, forming a concrete pier 110 feet in diameter and 20 feet in thickness upon which will be erected a building for the care of the intake pier and entrance to the tunnel.

We have continued to inspect and re-inspect the water connections with very good results, our annual receipts for water having increased \$36,174.41, this year amounting to \$833,395.33. Our collections for corporation cocks and work done

for individuals was \$19,857.31. We issued \$257,500.00 worth of bonds to refund old bonds. We also issued \$300,000.00 of bonds to form a current fund to pay the expenses of the Bureau each year from July 1st (the commencement of our fiscal year) to November 1st (the first semi-annual collection period).

We also issued \$750,000.00 worth of bonds for new construction (tunnel, intake pier, new pumping station, water tower, and extension of large feeder water mains). We received premiums on bonds to the amount of \$2,166.67. We paid out in salaries \$204,819.67, in refunding bonds \$257,500.00, in retiring bonds \$143,369.78, into a sinking fund \$4,302.50, in interest on bonds \$179,105.49, in maintenance and repairs \$295,138.55, and in extension and improvements \$1,071,799.92.

I am sorry to report that we have only been able to install 207 new meters because of lack of appropriation and funds, and have now only 2,620 meters on our 72,882 services, being only 3 3-5 per cent. The experience of all cities which have tried them is, that meters save large unnecessary waste of water, and are cheaper to the consumer. Cleveland and Detroit are similarly situated as to the available source of supply, and report enormous savings in waste and reduced water bills on account of meters. Chicago reports a waste of three billions of gallons of water per year, and estimates that meters would save that waste and reduce the water bills two-thirds. Our pumpage this year was 48,451,241,033 gallons, and there is little doubt but at least one-half would be saved by metering of all services, and the actual expense saved would exceed \$100,000.00, which could be saved to the users of water.

Our waste and leak force show that their inspection of 5,988 buildings discovered 8,460 leaking fixtures, and that the repairing of these leaks showed a saving of 3,928,000 gallons of water per day.

We have been very much annoyed again this year by lack of funds to lay district water mains. New streets are de-

veloped, houses built and the owners unable to sell or rent because of no water main in the street, and no funds available in the Water Bureau to lay them. We repeat what we have said in former years, that as the laying of these district mains is an extension of the plant, the funds should be raised by bond issue, and such funds should always be available.

The winter did not interfere with our hydrants to any extent, and they were all ready for use when needed. We added 74 new hydrants this year, and now have 4,965.

The valves have had their usual care, being oiled and turned every few months; 327 new valves have been placed, making a total of 8,558, in sizes from 4-inch to 48-inch.

We have added 1,195 new taps this year, and have 72,882 in use.

Electric Pump No. 2 was put in operation in January, and is doing good work on the high service. Steam Pump No. 5 was abandoned and removed, and we are preparing the foundations for new Steam Pump No. 1. The contract was let to Camden Iron Works for Electric Pump No. 3, and we hope very soon to abandon and remove Steam Pump No. 4, so as to install the third electric pump in its place. The work of removing an old pump so as to replace it with a new one is necessarily slow work, as we cannot spare one until we have another running to take up the work. Within the next year we hope and expect to have old Steam Pumps Nos. 1, 2, 3, 4 and 5 replaced by new Steam Pumps Nos. 1 and 2, and the three electric pumps. We will then be in a much safer condition than we have been for years.

Taken all in all, we have made much progress in the improvements we have been contemplating for several years, but there are many more that can be made to better the water conditions of Buffaló. The most important are: First—The speedy metering of the whole city and saving the unnecessary waste and expense, as well as increasing the pressures all over

the City. This cannot be done by increasing the pressure at the pumps, but must be by decreasing the unnecessary flow of water. Second—The laying of large water mains to the outskirts. The Kensington pipe is being laid; the 20-inch pipe in Louisiana Street should be laid at once; the 36-inch main should be extended to South Buffalo; a 36-inch main should be extended into the North Buffalo section, and another 36-inch main extended into the section east of Kensington, and from there to East Buffalo.

HENRY L. LYON,
Deputy Water Commissioner.

THE BUFFALO CITY WATER WORKS. HISTORICAL DESCRIPTION.

The Legislature of the State of New York on May 7th, 1868, passed an act authorizing the City of Buffalo to construct and maintain a system of waterworks for the use of the City and its inhabitants, and expend therefor the sum of \$705,000.00.

Under this act the City purchased the plant of the Buffalo Water Works Company, and on August 17th, 1868, the Commissioners, Hon. Wm. F. Rogers, Mayor Chandler J. Wells and James Ryan, took possession for the City.

The water was taken from the margin of Niagara River, the inlet being situated on Bird Island Pier, and a tunnel, running under Black Rock Harbor and the Erie Canal, about four feet in diameter and three hundred and thirty feet long, connected the Niagara River with the wells under the pumps.

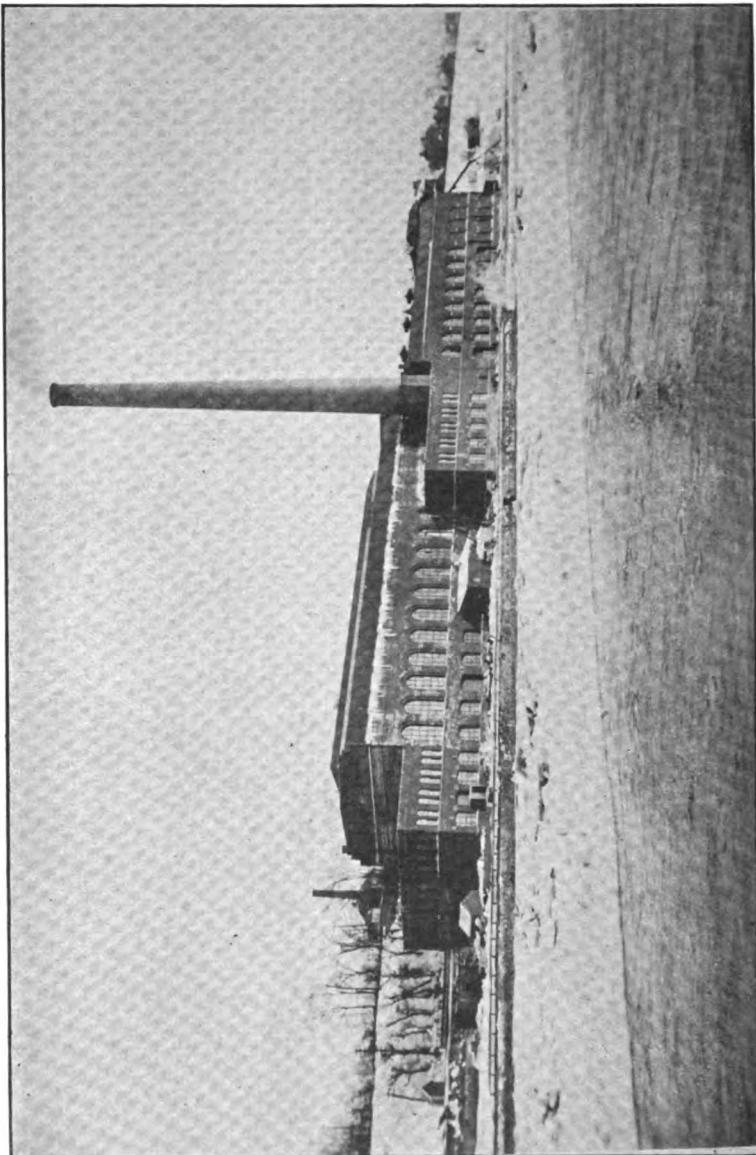

The pumps were a Double Cornish Bull Engine, made by I. P. Morris, of Philadelphia, in 1851, having a capacity of 4,000,000 gallons in twenty-four hours, and a Beam Engine, made by the Shepard Iron Works, of Buffalo, in 1866, having a capacity of 6,000,000 gallons in twenty-four hours.

The water was pumped into a reservoir, built on the block bounded by Niagara, Connecticut, and Vermont streets and Prospect Avenue, which would hold 11,000,000 gallons, and was then distributed through the City by 33 90-100 miles of pipe of the following sizes:

3-inch -----	486 feet
4-inch -----	51,629 feet
6-inch -----	79,375 feet
10-inch -----	19,667 feet
12-inch -----	9,045 feet
16-inch -----	11,489 feet
24-inch -----	7,304 feet

This plant could have been built for about \$500,000.00 at that time, and is the nucleus of the present works, which has been extended and improved until it is one of the largest in the country, the Pumping Station being the largest under one roof in the world.

PUMPING STATION.

PUMPING STATION

DESCRIPTION OF THE WORKS.

PUMPING STATION.

The Pumping Station is located on the bank of the Erie Canal at the foot of Massachusetts Avenue, and is separated from Niagara River by the Erie Canal, 165 feet in width, and Black Rock Harbor, 85 feet in width.

The building was rebuilt of brick in 1906 and 1907, is strictly fireproof, and is 640 feet in length and 102 feet in width, with the Erie Canal on one side and the New York Central & Hudson River Railroad on the other.

PUMPING ENGINES.

No.	Capacity in 24 Hours in Gallons	Make	Description	Year Construct'd	Horse Power
1	12,000,000	Worthington & Lake Erie -----	Horizontal compression.	1872 1898	430
2	20,000,000	Worthington & Lake Erie -----	Horizontal compression.	1876 1898	700
3	20,000,000	Worthington & Lake Erie -----	Horizontal compression.	1882 1898	700
6	20,000,000	Holly-Gaskell -----	Horizontal compression.	1889	700
7	20,000,000	Holly-Gaskell -----	Horizontal compression.	1892	700
8	30,000,000	Lake Erie-Snow -----	Triple expansion-----	1896	1,200
9	30,000,000	Lake Erie -----	Triple expansion-----	1898	1,200
*1	25,000,000	Snow -----	Centrifugal-----	1905	1,500
*2	25,000,000	Snow -----	Centrifugal-----	1907	1,500
202,000,000 -----					8,630

***Electric.**

BOILERS.

The south boiler house contains 16 horizontal, cylindrical, tubular boilers, each of which is 84 inches in diameter, 18 feet long, containing 172 tubes, each three inches in diameter, all equipped with McKenzie Traveling Grate Stokers. Six with Bonson Furnace.

The north boiler house with four 600 H. P. boilers will be completed in December, 1908.

ELECTRIC LIGHT PLANT.

Two vertical cross-compound condensing engines, built by the Lake Erie Engineering Company, of Buffalo, N. Y., in 1897.

Two fifty-kilowatt Thompson-Ryan Multipolar Generators, directly connected with the engines, each capable of developing a pressure of 125 volts with 400 amperes.

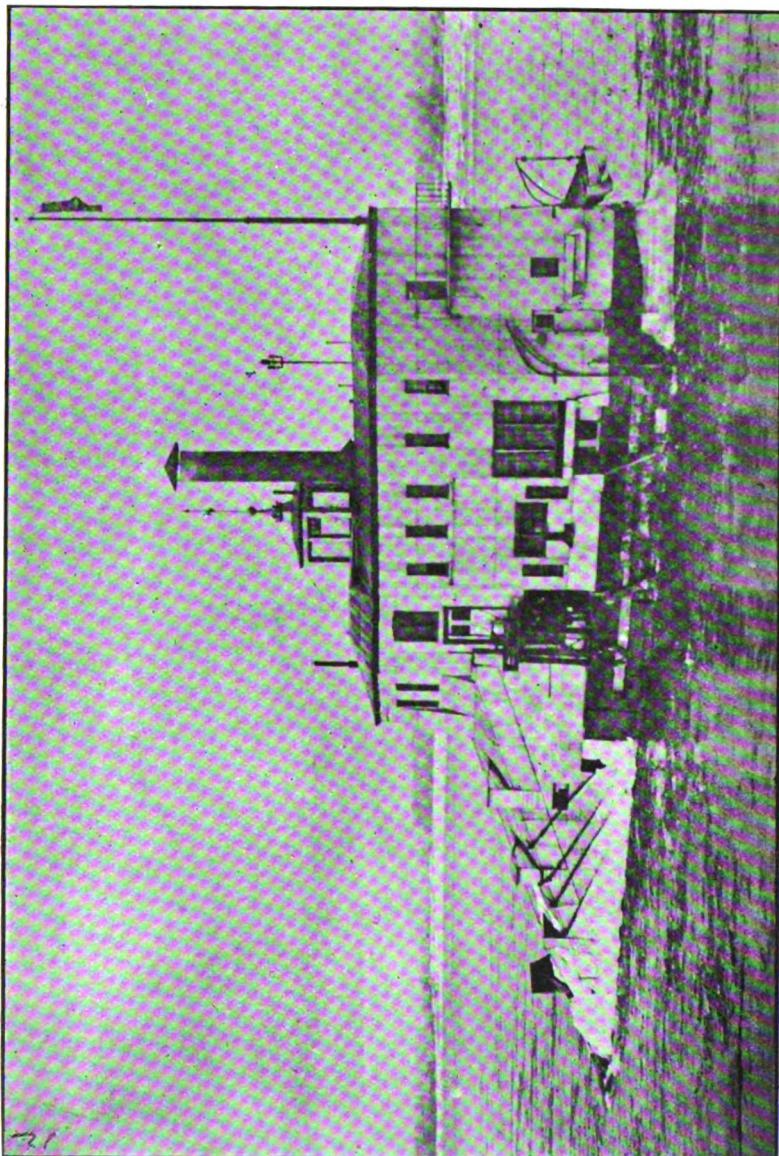

These furnish the lights for the Pumping Station and grounds, the Holly House on the hill and the Inlet Pier in Niagara River, 985 feet from the station, the cable passing through the new tunnel.

TUNNELS, INLET PIER AND WELLS.

The water is taken from the Inlet Pier, situate about the center of Niagara River, 985 feet from the Pumping Station and about one mile from Lake Erie. The water at this point is about 16 feet in depth. The pier is 106 feet in length and 18 feet in width, and is built of cut stone. The nose was repaired during the year 1906 and rebuilt of concrete, with a steel covering one inch thick.

The current in the river is from seven to fifteen miles per hour, being varied by freshets and the direction and velocity of the wind.

INLET PIER.

INLET PIER

On the sides of the pier are ice shields made of steel plates one inch thick, projecting two feet from the pier and extending down to within two feet of the bottom of the river. The lower part of the intakes in the pier is six feet above the bottom of the river, and the shields have gates opposite the intakes, that can be raised and lowered to prevent ice from entering the shafts.

On the pier is a building containing a kitchen for the use of the men employed there, and a 10 horse-power steam boiler to furnish steam and hot water for melting the ice in winter.

Two shafts in the pier lead to two tunnels connecting the pier with the shore wells, one of which is six feet in diameter and the other 6 by 12 feet in cross-section.

The tunnels are parallel with each other, and are about 30 feet apart. They are built in rock and are unlined. The capacity of the two tunnels is 350,000,000 gallons per day.

The wells are extensions of the tunnels, leading to the suction of the pumps under the Pumping Station, and are from four and one-half to eight feet in width and 18 feet in depth, and are lined throughout with cement.

During the early spring months slush ice fills the river to its full depth and it is only by the closest care and attention, that it can be kept from choking the pumps. The ice is kept out to some extent by the raising and lowering of the gates in the shield, and it is melted by pouring hot water and steam into it, but after that large quantities get through the tunnels and into the wells in the Pumping Station, where it is caught on revolving screens, and melted with hot water and steam. We are also troubled with anchor ice that will form on the gates and in the shafts on the pier. This is broken with pike poles and melted with steam and hot water, and if that is not effective, it is blasted with dynamite.

DISTRIBUTION.

Water is distributed through cast-iron pipe as follows:

	No. of Feet Laid Previous to July 1, 1908	No. of Feet Laid from July 1, 1907 to July 1, 1908	Total
1½ inch -----	200		200
2 inch -----	1,963		1,963
3 inch -----	8,261		8,261
4 inch -----	190,550	1,032	191,582
6 inch -----	1,588,651	45,018	1,633,669
8 inch -----	13,062		13,062
10 inch -----	221,032		221,032
12 inch -----	212,448	320	212,768
16 inch -----	290,695	3,062	293,757
20 inch -----	77,489		77,489
24 inch -----	16,978		16,978
30 inch -----	2,422		2,422
36 inch -----	94,143	12,850	106,993
48 inch -----	12,464		12,464
Totals-----	2,730,358	62,282	2,792,640

Miles, 528 4-5.

HYDRANTS, VALVES, SERVICE CONNECTIONS AND METERS.

We have 4,965 hydrants for fire purposes. In winter they are protected by a steel cover to keep them free from snow, and give the firemen a clear place to make their connections.

We have 8,558 valves, in sizes from four inches to 48 inches.

We have 72,882 connections, in sizes from one-half inch to 10 inches.

FIRE BOAT AND PIPE LINE.

A fireboat water pipe line was constructed in 1897 in Washington Street, from Buffalo River to Genesee Street. It is

a 12-inch steel pipe, 6,130 feet in length, tested to a pressure of 300 pounds to the square inch.

A hydrant and call box are placed every 250 feet, each hydrant having four 3½-inch nozzles with separate gates.

A connection was made with this line at the corner of Washington and Exchange streets in November, 1904, and the line extended through Exchange Street and the Terrace to Pearl Street, and then up Pearl Street to Genesee Street, a distance of 3,626 feet. This addition was constructed of 12-inch cast iron pipe, and tested to a pressure of 300 pounds to the square inch.

A further connection was made in October, 1906, with the Washington Street fire supply line, and continued along the northerly side of Carroll Street to Michigan Street.

The pipe is of cast iron, 12 inches in diameter, and built similar in all details to the Pearl Street fire line.

The total length is 1,423 lineal feet, with six special hydrants, with three-way valves and manholes on main line, and electric communication with fire boat at hydrants.

The average depth of main is three and one-half feet.

The grade of line descends from Washington Street to Michigan Street, with one drain valve at Michigan Street.

A further connection was made with Washington Street fire supply line, and continued along the northerly sidewalk of Ohio St. to Elk St., thence crossing Elk St. and the New York, Lackawanna & Western Railroad tracks to the northerly side of Ohio Street, thence along the northerly side of Ohio Street to Liberty Street, thence along Liberty Street and the Clark & Skinner Canal to Buffalo River.

The pipe is of cast iron, 12 inches in diameter, and built similar in all details to the Pearl Street fire line.

The total length is 1,160 lineal feet, with four special hydrants.

The average depth of main is three and one-half feet.

The grade of line descends from Washington Street to 112 feet south of Illinois Street, and ascends to fire boat connection on Liberty Street and Buffalo River.

The fire boat connection consists of four eight-inch pipes connecting with the twelve-inch main with Y's and one-eighth bends. On end of each eight-inch pipe is a three-way Siamese connection with 3½-inch opening for hose to be attached from fire boat.

The pipe is not connected with the city water mains, but arranged at the Buffalo River end so that the fire tugs can connect to it and pump water from Buffalo River.

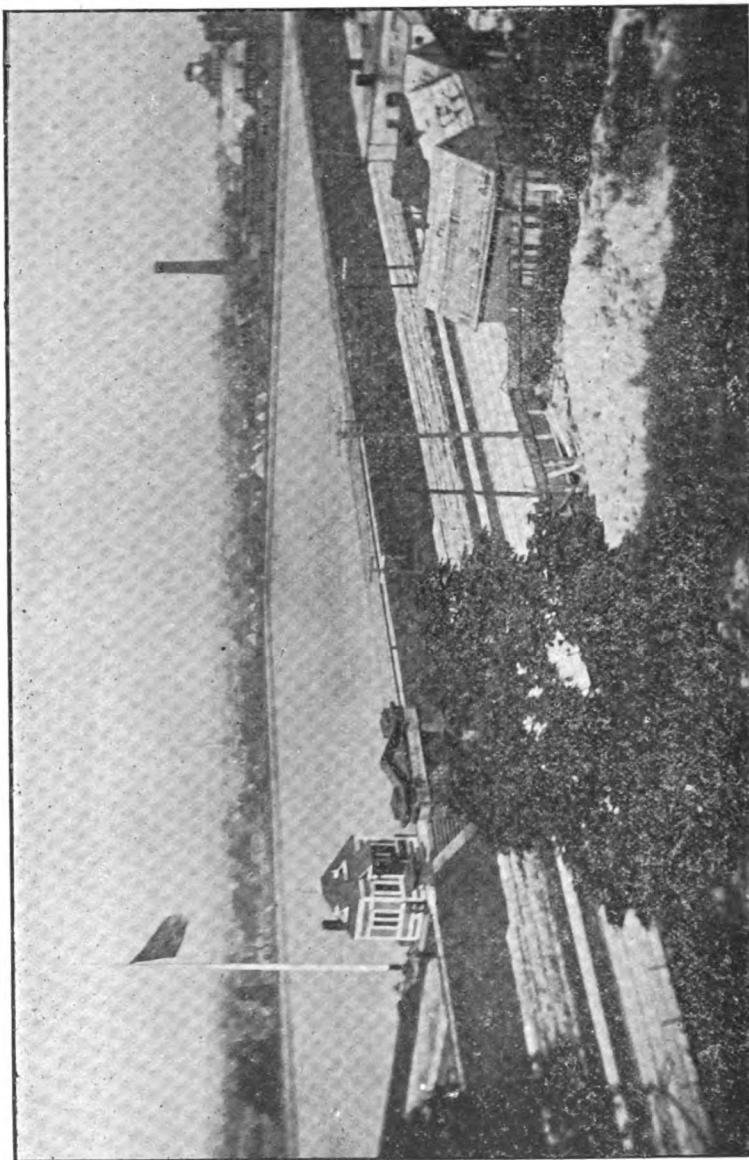

The three fire tugs have a capacity of 18,000 gallons per minute.

RESERVOIR.

Prospect Reservoir covers the block bounded by Best, Jefferson, Dodge and Masten streets. It is 1,472½ feet in length, 597½ feet in width, contains 20 and 20-100 acres, and has a capacity of 116,213,827 gallons when filled to a depth of 30 feet. The surface of the water is then 113 feet above the level of the water at the Inlet Pier and 685 and 23-100 feet above mean tide at New York.

The site was purchased October 1st, 1874. Work on the reservoir was commenced in June, 1889, and completed in July, 1894. The cost of the land was \$79,382.00, and of the construction \$557,335.79.

BEST STREET RESERVOIR.

BEST STREET RESERVOIR

The description of the two divisions is as follows:

JEFFERSON STREET DIVISION.

Average length at high water line-----	653 feet
Average width at high water line-----	465 feet
Depth from top of bank-----	43 feet
Greatest thickness of bank-----	184 feet
Top of bank 117 feet above Niagara River.	
Capacity -----	64,270,477 gallons
Inlet and outlet, 36-inch iron pipes.	

MASTEN STREET DIVISION.

Average length at high water line-----	637 feet
Average width at high waterline-----	466 feet
Depth from top of bank-----	34 feet
Greatest thickness of bank-----	184 feet
Top of bank 117 feet above Niagara River.	
Capacity -----	51,943,380 gallons
Inlet and outlet, 36-inch iron pipes.	

The quantities excavated and used were as follows:

Earth excavation -----	613,532 cu. yds.
Clay puddle -----	58,174 cu. yds.
Stone masonry -----	9,596 cu. yds.
Concrete -----	13,343 cu. yds.
Stone paving -----	32,804 sq. yds.
Curbing -----	4,588 lin. ft.
English Portland cement -----	15,000 bbls.
American cement -----	16,200 bbls.

All earth, clay, sand, and gravel used in construction were found on the site.

CONSUMPTION.

The average daily consumption in 1868 was 4,000,000 gallons, the population was 100,000, making the daily per capita consumption 40 gallons.

In 1907 the average daily consumption was 135,483,126 gallons, the population 410,000, making the daily per capita consumption 330 gallons.

The greatest amount pumped in twenty-four hours during the last year was on February 9th, 1908, when the pumps

registered 197,672,720 gallons, making a per capita consumption of 482 gallons.

The least amount pumped in twenty-four hours during the last year was on April 20, 1908, when the pumps registered 119,553,700 gallons, making a per capita consumption of 291 gallons.

The total amount of water pumped during the last year after allowances for slip was 48,451,241,033 gallons, divided about equally between the high service, with a pressure at the pumps of 75 pounds to the square inch, and the reservoir service, with a pressure at the pumps of 50 pounds to the square inch, the average daily pressure in the City being 30 pounds to the square inch.

Registered Pumpage for the Year.	Gallons.
From July 1, 1907, to July 1, 1908, by steam power-----	39,605,213,370
From July 1, 1907, to July 1, 1908, by electric power-----	12,806,549,000
From July 1, 1906, to July 1, 1907, by steam power-----	44,816,892,520
From July 1, 1906, to July 1, 1907, by electric power-----	7,887,860,000
Decrease -----	292,990,150

Actual pumpage after deducting 10 per cent. for loss from plunger and valve slippage on steam pumps:

From July 1, 1907, to July 1, 1908, by steam power-----	35,644,692,033
From July 1, 1907, to July 1, 1908, by electric power-----	12,806,549,000
From July 1, 1906, to July 1, 1907, by steam power-----	40,335,203,268
From July 1, 1906, to July 1, 1907, by electric power-----	7,887,860,000
Average daily pumpage as registered-----	171,793,842
Actual daily pumpage after deduction for loss-----	135,483,126
Average daily per capita (based on 410,000)-----	330
Greatest amount pumped in one day (February 9, 1908)-----	197,672,720
Least amount pumped in one day (April 20, 1908)-----	119,553,700

METERS, JULY 1, 1908.

Total -----						\$191,376.02	\$445,506.99

*To be refunded, \$279,382.00.

*Issued after estimates 1907-1908 were confirmed, \$10,000.00.

SUMMARY.

Interest payable -----	\$191,376.02
Bonds payable -----	445,506.99
For Sinking Fund -----	8,605.00
By Water Bonds to be refunded -----	\$645,488.01
Balance -----	\$279,382.00
Balance -----	\$366,106.01

**COMPARATIVE STATEMENT OF REVENUE RECEIVED ANNUALLY
FROM THE USE OF WATER, FROM DATE OF PURCHASE,
AUGUST 15, 1868.**

Year ending July 1, 1869. (P. 1.)

Revenue derived from works since they passed into the possession of the city.....	\$111,123.42
---	--------------

July 1, 1869, to Dec. 31, 1870.

For water rates and furnishing and putting in service connections in the main pipes, and deposited with the city treasurer	159,655.88
--	------------

For the year 1871. (P. 23)

Receipts for water deposited with City Treasurer.....	124,865.00
---	------------

For the year 1872 (P. 6)

Receipts for water rates.....	135,441.26
-------------------------------	------------

For the year 1873. (P. 10)

Receipts for water rates.....	165,212.02
-------------------------------	------------

For the year 1874. (P. 9)

To cash received for water rates.....	172,317.25
---------------------------------------	------------

For the year 1875. (P. 7)

The total receipts for water were.....	184,516.48
--	------------

For the year 1876 (P. 8)

To cash received for water rates and public hydrants.....	182,634.39
---	------------

For the year 1877. (P. 11)

Cash received for water rates and public hydrants.....	185,985.24
--	------------

For the year 1878. (P. 14)

Cash received for water rates and public hydrants.....	196,723.17
--	------------

For the year 1879. (P. 18)

Cash received for water rates and public hydrants.....	201,384.66
--	------------

COMPARATIVE STATEMENT OF REVENUE—Continued.

For the year 1880.	(P. 12)			
Cash received as water rates.....			210,352.48	
For the year 1881.	(P. 22)			
Cash received as water rates.....			205,919.51	
For the year 1882.	(P. 18)			
Paid by city for water in 1882.....		\$100,000.00		
Paid by other consumers.....		250,080.44		350,080.44

PUMPING STATION.

HISTORY OF ENGINES.

ENGINE NO. 1.

This was the first engine purchased by the City after it had acquired the property of the Buffalo Waterworks Company.

It was erected by Henry R. Worthington. Steam was turned on, for the first time, December 12, 1872. Its capacity was ten million gallons of water in twenty-four hours. The cost was \$51,750.

The foundations were rebuilt and engines repaired by Messrs. Farrar & Trefts, of Buffalo, N. Y., in 1886, at a cost of \$4,288.

In 1898 the Lake Erie Engineering Works, of Buffalo, N. Y., reconstructed the steam end at a cost of \$23,750.

The principal dimensions of the engine are as follows:

Number of steam cylinders-----	4
Diameter of the two high-pressure cylinders-----	27 inches each.
Diameter of the two low-pressure cylinders-----	54 inches each.
Diameter of the high-pressure piston-rod-----	5 inches.
Diameter of the two low-pressure piston-rods-----	5 inches each.
Stroke of the engine-----	48 inches.
Diameter of each plunger-----	30 inches.
Diameter of plunger-rod-----	5 inches.
Number of gals. of water pumped by each revolution-----	579
Capacity of engine in twenty-four hours-----	12 million gals
Number of valves in pump chambers-----	64
Diameter of valves-----	10½ inches.
Diameter of each of the two fly-wheels-----	16 feet.
Weight of each fly-wheel-----	20 tons.
Diameter of the discharge pipe-----	36 inches.
Horse-power of engine-----	430

ENGINE NO. 2.

On the site of this engine was erected the Double Cornish Bull Engines, Nos. 1 and 2, built by Norris, of Philadelphia, Pa. Their capacity was 4,000,000 gallons in twenty-four hours. They were started for the first time in January, 1851. They were acquired by the City in the purchase of the Buffalo Wateworks Company plant in 1868, and were sold in 1875 for \$2,500.

This engine was erected by Henry R. Worthington. Steam was turned on for the first time, September 22, 1876. Its capacity was 15,000,000 gallons in twenty-four hours. The cost was \$59,000.

The foundations were rebuilt and engines repaired by Mr. Henry G. Trout, of Buffalo, N. Y., in 1891, at a cost of \$6,629.

In 1898 the Lake Erie Engineering Works of Buffalo, N. Y., reconstructed the steam end at a cost of \$28,750.

The principal dimensions of the engine are as follows:

Number of steam cylinders-----	4
Diameter of the two high-pressure cylinders-----	34 inches each.
Diameter of the two low-pressure cylinders-----	68 inches each.
Diameter of the high-pressure piston-rod-----	5½ inches.
Diameter of the two low-pressure piston rods-----	6 inches each.
Stroke of the engine-----	48 inches.
Diameter of each plunger-----	38 inches.
Diameter of plunger-rod-----	6 inches.
Number of gals. of water pumped by each revolution	930
Capacity of engine in twenty-four hours-----	20 million gals.
Number of valves in pump chambers-----	96
Diameter of valves-----	10½ inches.
Diameter of each of the two fly-wheels-----	18 feet.
Weight of each fly-wheel-----	25 tons.
Diameter of discharge pipe-----	36 inches.
Horse-power of engine-----	700

ENGINE NO. 3.

This engine was erected by Henry R. Worthington in 1882. Its capacity was 15,000,000 gallons of water in twenty-four hours. The cost was \$42,500.

In 1898 the Lake Erie Engineering Works of Buffalo, N. Y., reconstructed the steam end at a cost of \$28,750.

The principal dimensions of the engine are as follows:

Number of steam cylinders.....	4
Diameter of the two high-pressure cylinders.....	34 inches each.
Diameter of the two low-pressure cylinders.....	68 inches each.
Diameter of the high-pressure piston-rod.....	5½ inches.
Diameter of the two low-pressure piston-rods.....	6 inches each.
Stroke of the engine.....	48 inches.
Diameter of each plunger.....	38 inches.
Diameter of plunger-rod.....	6 inches.
Number of gals. of water pumped by each revolution.....	930
Capacity of engine in twenty-four hours.....	20 million gals.
Number of valves in pump chambers.....	96
Diameter of valves.....	10½ inches.
Diameter of each of the two fly-wheels.....	18 feet.
Weight of each fly-wheel.....	25 tons.
Diameter of discharge pipe.....	36 inches.
Horse-power of engine.....	700

ENGINE NO. 6.

This engine was erected by The Holly Manufacturing Company, of Lockport, N. Y., in 1889, and cost \$100,000.

The principal dimensions of the engine are as follows:

Number of steam cylinders.....	4
Diameter of the two high-pressure cylinders.....	36 inches each.
Diameter of the two low-pressure cylinders.....	72 inches each.
Diameter of the high-pressure piston-rod.....	5 inches.
Diameter of the two low-pressure piston-rods.....	5½ inches each.
Stroke of the engine.....	48 inches.
Diameter of each plunger.....	38 inches.
Diameter of plunger-rod.....	6 inches.
Number of gals. of water pumped by each revolution.....	930
Capacity of engine in twenty-four hours.....	20 million gals.
Number of valves in pump chambers.....	2376
Diameter of valves.....	1 1/3 inches.
Diameter of fly-wheel.....	23 ft. 4 inches.
Weight of fly-wheel.....	31 tons.
Diameter of discharge pipe.....	36 inches.
Horse-power of engine.....	700

ENGINE NO. 7.

This engine was erected by The Holly Manufacturing Company, of Lockport, N. Y., in 1892, and cost \$100,000.

The principal dimensions of the engine are as follows:

Number of steam cylinders-----	4
Diameter of the two high-pressure cylinders-----	36 inches each.
Diameter of the two low-pressure cylinders-----	72 inches each.
Diameter of the high-pressure piston-rod-----	5 inches.
Diameter of the two low-pressure piston-rods-----	5½ inches each.
Stroke of the engine-----	48 inches.
Diameter of each plunger-----	38 inches.
Diameter of plunger-rod-----	6 inches.
Number of gals. of water pumped by each revolution	.930
Capacity of engine in twenty-four hours-----	20 million gals.
Number of valves in pump chambers-----	2376
Diameter of valves-----	1 1-3 inches.
Diameter of fly-wheel-----	23 ft. 4 inches.
Weight of fly-wheel-----	31 tons.
Diameter of discharge pipe-----	36 inches.
Horse-power of engine-----	700

ENGINE NO. 8.

This engine was erected by the Lake Erie Engineering Works, of Buffalo, N. Y., in 1896, and cost \$70,000.

Steam was turned on for the first time July 4, 1896.

Pump and foundation rebuilt in 1905 by Snow Steam Pump Works, and cost \$35,000.

The principal dimensions of the engine are as follows:

Number of steam cylinders.....	3
Diameter of the high-pressure cylinder.....	37 inches.
Diameter of the intermediate cylinder.....	63 inches.
Diameter of the low-pressure cylinder.....	94 inches.
Diameter of the two piston-rods.....	5 inches.
Stroke of the engine.....	60 inches.
Number of pumps.....	3
Diameter of each plunger.....	42 inches.
Diameter of each of the four plunger-rods.....	5½ inches.
Diameter of air pump.....	33 inches.
Number of gals. of water pumped by each revolution.....	1079
Capacity of engine in twenty-four hours.....	30 million gals.
Number of valves in pump chambers.....	1248
Diameter of valves.....	4¾ inches.
Diameter of each of the two fly-wheels.....	20 feet.
Weight of fly-wheels.....	32 tons each.
Diameter of discharge pipe.....	48 inches.
Horse-power of engine.....	1200

ENGINE NO. 9.

This engine was erected by the Lake Erie Engineering Works, of Buffalo, N. Y., in 1898, and cost \$70,000.

The principal dimensions of the engine are as follows:

Number of steam cylinders.....	3
Diameter of the high-pressure cylinder.....	37 inches.
Diameter of the intermediate cylinder.....	63 inches.
Diameter of the low-pressure cylinder.....	94 inches.
Diameter of the two piston-rods.....	5 inches each.
Stroke of the engine.....	60 inches.
Number of pumps.....	3
Diameter of each plunger.....	42 inches.
Diameter of each of the four plunger-rods.....	5½ inches.
Diameter of air pump.....	33 inches.
Number of gals. of water pumped by each revolution.....	1079
Capacity of engine in twenty-four hours.....	30 million gals.
Number of valves in pump chambers.....	1188
Diameter of valves.....	4¾ inches.
Diameter of each of the two fly-wheels.....	20 feet.
Weight of fly-wheels.....	32 tons each.
Diameter of discharge pipe.....	48 inches.
Horse-power of engine.....	1200

ELECTRIC PUMP NO. 1.

This is an electrically driven centrifugal pump, and was erected by Snow Steam Pump Works, of Buffalo, N. Y., in 1905, and cost \$40,000. The motor is a vertical-shaft three-phase induction motor furnished by the General Electric Company, of Schenectady, N. Y.

Size of pump.....	13 ft. by 13 ft.
Diameter of impellers.....	36 inches.
Stages	2
Revolutions per minute.....	500
Horse-power	1500
Capacity in 24 hours.....	25 million gals.
Diameter of discharge pipe.....	30 inches.

ELECTRIC PUMP NO. 2.

This is an electrically driven centrifugal pump, and was erected by Snow Steam Pump Works, of Buffalo, N. Y., in 1907, and cost \$40,000. The motor is a vertical-shaft three-phase induction motor furnished by The General Electric Company, of Schenectady, N. Y.

Size of pump.....	13 ft. by 13 ft.
Diameter of impellers.....	36 inches.
Stages	2
Revolutions per minute.....	500
Horse-power	1500
Capacity in 24 hours.....	25 million gals.
Diameter of discharge pipe.....	30 inches.

ENGINE RECORD.

ENGINE NO. 1 FROM JULY 1, 1907, TO JUNE 30, 1908.

PURITY OF WATER.

Buffalo, March, 30, 1908.

Following is a report of Bacteriologist, showing condition of reservoir water:

March 27, 1908. East Basin. Bacteria per cubic centimeter--- 266
 March 27, 1908. West Basin. Bacteria per cubic centimeter--- 320

Water is in good condition for this time of year.

Buffalo, March 30, 1908.

Following is the report of City Chemist showing condition of reservoir water:

- Laboratory No. 15,102.
- Source, Reservoir West Basin.
- Delivered by S. Ogden.
- Received March 27, 1908.
- For complete Sanitary Analysis.

The sample of water March 27, 1908, gives results as follows:

Odor at 100 deg. C-----	None
Reaction -----	Neutral
Color -----	Greenish
Taste -----	Agreeable
Residue after ignition-----	Grains per gal. 7.60
Organic and volatile residue-----	3.30
Total residue, dried at 100 deg. C-----	10.90
Hardness, temporary-----	2.28
Hardness, permanent-----	4.43
Hardness, Total-----	6.71
Chlorin-----	Parts per Million 11.00
Phosphates as P ₂ O ₅ -----	Trace
Oxygen absorbed in 15 minutes-----	0.244
Oxygen absorbed in 4 hours-----	0.56
Nitrogen as free ammonia-----	0.03
Nitrogen by alkaline permanganate-----	0.06
Nitrogen as nitrites-----	Trace
Nitrogen as nitrates-----	Present

Microscopical examination: Sand and algae. This water is in good condition for this time of year.

Respectfully submitted,

ERNEST WENDE, M. D.,

Health Commissioner.

VALVES.

Total number of valves in use previous to July 1, 1907-----	8,231
Total number set during the year July 1, 1907, to July 1, 1908-----	327
Total-----	8,558

The number of valves set during the year of different sizes is as follows:

4-inch -----	39
6-inch -----	268
12-inch -----	2
16-inch -----	7
20-inch -----	1
36-inch -----	10
Total-----	327

FIRE HYDRANTS.

Number of hydrants in use previous to July 1, 1907-----	4,891
Number of hydrants added during the year July 1, 1907, to	
July 1, 1908-----	75
	4,966
Number of hydrants abandoned from July 1, 1907, to July	
1, 1908 -----	1
Total now in use-----	4,965

SUMMARY OF STATISTICS.

FOR THE YEAR ENDING JUNE 30, 1908.

(In form recommended by the New England Water Works Association.)

MUNICIPAL WATER WORKS.

BUFFALO, ERIE COUNTY, STATE OF NEW YORK.

GENERAL STATISTICS.

Population—410,000.

Date of Construction—By private Company in 1848.

Purchased by City in 1868.

By whom owned—City of Buffalo.

Source of Supply—Lake Erie and Niagara River.

Mode of Supply—Pumping.

PUMPING STATISTICS.

1. Builders of Pumping Machinery:

No.	Capacity in 24 hours in Gallons.	Make	Description.	Year con- structed.	Horse- power.
1	12,000,000	Worthington and Lake Erie	Horizontal compression	1872 1898	430
2	20,000,000	Worthington and Lake Erie	Horizontal compression	1876 1898	700
3	20,000,000	Worthington and Lake Erie	Horizontal compression	1882 1898	700
6	20,000,000	Holly—Gaskell	Horizontal compression	1889	700
7	20,000,000	Holly—Gaskell	Horizontal compression	1892	700
8	30,000,000	Lake Erie—Snow	Triple expansion	1896	1,200
9	30,000,000	Lake Erie	Triple expansion	1898	1,200
10	25,000,000	Snow	Electric centrifugal	1905	1,500
11	25,000,000	Snow	Electric centrifugal	1907	1,500
	202,000,000	8,630

2. Description of Fuel used:

- (a) Kind—Bituminous Coal.
- (b) Brand of Coal—Mine run and slack.
- (c) Average price per gross ton, delivered—\$2.20.
- (d) Percentage of ash—10%.

3. Coal consumed for the year:

On Engines—84,866,940 lbs.
Other purposes—11,876,000.

- 4. Amount of other fuel used—Electricity, 3,000 H. P., at \$25.00 per H. P.
- 5. Total coal consumed on steam pumps—84,866,940 lbs.
- 6. Total pumpage for the year without allowance for slip by steam—39,605,213,370 gallons.
- 6a. Total pumpage by electricity measured by Venturi Meter—12,806,549,000.

7. Average static head against which pumps work:
 Low Service, 115 ft.
 High Service, 172.80 ft.
8. Average dynamic head against which pumps work:
 Low Service, 130 ft.
 High Service, 188 ft.
9. Number of gallons pumped per pound of coal—466.

10. Duty	$\frac{\text{gallons pumped} \times 8.34 \times 100 \times \text{dynamic head}}{\text{Fuel consumed.}}$
Engine No. 1.	$\frac{229,075,560 \times 8.34 \times 100 \times 130}{549,760} = 45,176,754$
" No. 2.	$\frac{3,292,214,200 \times 8.34 \times 100 \times 130}{7,901,280} = 45,175,195$
" No. 3.	$\frac{2,110,365,300 \times 8.34 \times 100 \times 130}{5,064,850} = 45,175,238$
" No. 4.	$\frac{2,262,331,680 \times 8.34 \times 100 \times 130}{12,629,550} = 45,175,164$
" No. 5.	$\frac{2,912,528,160 \times 8.34 \times 100 \times 188}{9,611,330} = 47,512,791$
" No. 6.	$\frac{1,929,963,900 \times 8.34 \times 100 \times 188}{6,066,590} = 49,879,240$
" No. 7.	$\frac{2,855,123,250 \times 8.34 \times 100 \times 188}{9,421,870} = 47,512,912$
" No. 8.	$\frac{10,621,773,110 \times 8.34 \times 100 \times 130}{16,994,810} = 67,782,025$
" No. 9.	$\frac{10,391,838,210 \times 8.34 \times 100 \times 130}{16,626,900} = 67,762,668$

Cost of Pumping, Figured on Pumping Station Expenses, viz.:

Steam—Fuel	\$100,386.57
Oil and waste.....	2,785.65
Supplies	4,315.32
Salaries	98,348.75 \$193,236.29
Electricity—Current	\$56,250.00
Oil and waste.....	400.00
Supplies	1,000.00
Salaries	6,640.00 \$64,290.00

11. Per million gallons pumped:

Steam, \$5.42.

Electricity, \$5.02.

12. Per million gallons raised 1 ft. (dynamic):

Steam, 3½ cents.

Electricity, 2 2-3 cents.

FINANCIAL STATISTICS.

RECEIPTS.

Balance Brought Forward.....	\$183,129.01
(a) From ordinary (maintenance) receipts.....	19,857.31
(b) From extraordinary receipts (bonds, etc.).....	2,173.97
Total	\$205,160.29

From Water Rates:

A. Fixture Rates	\$542,577.25
B. Meter Rates	194,773.18
C. Total from Consumers.....	\$737,350.43
D. For Hydrants	73,200.00
F. For Street Watering.....	600.00
G. For Public Buildings.....	22,244.90
J. Total from Municipal Departments.....	96,044.90
L. From Bond Issue.....	1,307,500.00
M. Total	\$2,346,055.62

EXPENDITURES.

Waterworks Maintenance:

AA. Operation (management and repairs)....	\$489,708.70
BB. Special:	
CC. Total Maintenance	\$489,708.70
DD. Interest on Bonds.....	179,105.49
(CC+DD)	\$668,814.19
EE. Payment on Bonds.....	300,749.99
FF. Sinking Fund	4,302.50

Waterworks Construction:

GG. Extension of mains.....	\$70,181.49
II. Extension of meters.....	10,256.82
JJ. Special:	
Reconstruction of Pumping Station....	33,248.80
New Pumping Station and Tunnels....	968,369.63
KK. Total Construction	\$1,082,056.74
MM. Balance	290,132.20
N. Total	\$2,346,055.62

DISPOSITION OF BALANCE: \$20,132.20 FOR RECONSTRUCTION.

O. Net cost of works to date.....	\$9,532,278.81
P. Bonded debt at date.....	5,216,632.02
Q. Value of Sinking Fund at date.....	4,302.50
R. Average rate of interest, 4 per cent.	

STATISTICS OF CONSUMPTION OF WATER.

1. Estimated total population to date....	410,000
2. Estimate population on lines of pipe..	410,000
3. Estimated population supplied,	410,000
4. Total consumption for the year, gallons	48,451,241,033
5. Passed through meters, gallons.....	9,784,875,000
6. Percentage of consumption metered...	20½%
7. Average daily consumption, gallons..	135,483,126
8. Gallons per day to each inhabitant....	330
9. Gallons per day to each consumer.....	330
10. Gallons per day to each tap.....	330
11. Cost of supplying water, per million gallons, figured on total maintenance (item CC)	\$10.11
12. Total cost of supplying water, per mil- lion gallons, figured on total main- tenance and interest on bonds.....	\$13.80

**STATISTICS RELATING TO DISTRIBUTION
SYSTEM.**

MAINS.

1. Kind of pipe, cast iron.
2. Sizes, from $1\frac{1}{2}$ to 48 inch.
3. Extended, 63,299 feet during year.
4. Discontinued, none during year.
5. Total now in use, 528 4-5 miles.
6. Cost of repairs per mile, \$0.63.
7. Number of leaks per mile.
8. Length of pipes less than 4 inches diameter, 2 miles.
9. Number of hydrants added during year, 74.
10. Number of hydrants now in use, 4,965.
11. Number of stop gates added during year, 327.
12. Number of stop gates now in use, 8,558.
13. Number of stop gates smaller than 4-inch, 25.
14. Number of blow-offs, 20.
15. Range of pressure on mains, 15 lbs. to 75 lbs.

SERVICES.

- 16, 17, 18, 19, 20, 23, 24. All services are put in by the consumer. We furnish only the main.
21. Number of service taps added during the year, 1,195.
22. Number now in use, 72,882.
25. Number of meters added, 207.
26. Number now in use, 2,620.
27. Percentage of services metered, 3 3-5%.
28. Percentage of receipts from metered water ($B \div C$), 26%.
29. Number of motors and elevators added, none.
30. Number now in use, 19.
