

TO STEAM ENGINE MAKERS.

SEALD PROPOSALS will be received by the Committee of the Corporation, on the Fire Department, at the Street Commissioner's Office, No. 8 City Hall, until Monday, the 1st day of March next, for making and erecting a Steam Engine, with boiler and apparatus complete, to be constructed on the most approved principles, and the workmanship to be performed in the best manner, and with lifting and forcing pumps, conducting pipes, &c. The proposed Engine to be capable of raising three hundred gallons of water per minute, from the Public Well, near the intersection of the Bowery and Thirteenth street, and discharge the same into the Reservoir adjoining the well. The depth of the well is seventy feet below the surface of the ground, and the elevation of the top of the Reservoir will be forty-seven feet above the surface, making together, one hundred and seventeen feet for the whole height of the lift. Persons intending to estimate for the above, are desired to apply at the Street Commissioner's Office for further information previous to offering their proposals. By order,

R. GRAVES, Street Commissioner.

Street Commr's. Office, Feb. 11, 1830. Feb 11
