City Water Works.—The Messrs. Easton, of Rochester, N. Y., propose to furnish this city with water from the Pewaukee lake, and last Saturday Messrs. Casgrain & Soulerin, civil engineers of this city, commenced making survey of the grounds. The Messrs. Easton are about to ascertain the full cost of accomplishing the work, and then will make an offer to the city. The Pewaukee lake is 256 feet above the level of this city, and it is proposed to supply water from there in the same way as New York city obtains it by the Croton aqueduct.
