

TO BUILD BIG WATER TANK AT GREEN RIVER

GREEN RIVER, Wyo., June 23

—The Green River Water Works company is enlarging a number of the water mains preparatory to installing a 500,000 gallon water tank to take the place of the old tank now located at the head of Sage street. This tank will be constructed of steel and concrete and will be located on the second bench back of the old tank. With this added capacity the water pressure will be greatly increased as well as enable the company to supply a much greater demand. Work on the new tank is expected to be started very soon.
