Hydraulic Cement.

Hydraulic cement, of best quality, manufactured at their works, for sale in lots of 500 lbs. and upwards.

Also, Ground Lime, a superior article for Builders.

ISAAC FRYER, Sec'y.

January 19, 1850.

BALL & CO'S PATENT Indestructible Water Pipe.

We publish below the opinions of others who have a personal knowledge of our Pipe, and would request all persons interested in the conveyance of water to investigate its merits for themselves. It is being cheaper than Cast iron pipe, and incomparably more durable (as there is no chance to commence decay but continually grows more permanent) it must supersede it altogether in works requiring durability and purity.

Branching, tapping, altering or relaying, is done with the greatest facility, and certainty, without injury, in a space of time equal to the winding up of a clock; and the heat produced may be used for the benefit of those who have requested information for the purpose. We have witnessed and many of us disinterested, and is now given to avoid the necessity of answering them any calls upon us for information not the greatest facility, and certainty, without injury, in a space of time equal to the winding up of a clock; and the heat produced may be used for the benefit of those who have requested information for the purpose. We have witnessed and many of us

D. APPLETON & CO. PUBLISH This Week No. 1, with numerous illustrations, price 25 cents.

Great American Mechanical Work.

The Mechanic, Engineer or Machinist, from the time he commences his profession till he arrives at the summit of the most successful professional career, will find this an indispensable work of reference.

This volume will be of royal 8vo, size, containing nearly 2,000 pages, 1,500 plates, and 5,000 cuts; it will fill up a column that has long been a requirement to practical working men, and those intended for the engineering profession. It will present Working Drawings and Specifications of all the most important works in the United States, and independent of its American value as embracing the results of American industry, will be a complete guide in Mechanics, Machinery, Engine work, and the substance of at least a thousand dollars saved in expensive folio volumes or magazines.

Seventy-five plates are embraced in the 1st No., and the Same will be published with the next. It will contain drawings of the most important works in the United States, and independent of its American value as embracing the results of American industry, will be a complete guide in Mechanics, Machinery, Engine work, and the substance of at least a thousand dollars saved in expensive folio volumes or magazines.

Newcastle, January 11, 1850.

SAML. MEEKER.

BEACH, BROTHERS, New York Sun Establishment.

Having for the past three years laid many of Messrs. Ball & Co's patent cement pipes in the Newark Aqueduct, I prefer them to any pipe that I have used, their cost being one-third less than iron pipe, and also being free from wear and rust, and can most effectually be treated for SW and SWP purposes.

ELECTRIC CURRENTS, Engine and Agt. Co.

In addition to the above testimonials, we can state that, having had experience and personal knowledge of the durability and strength of the above pipe, we have no hesitation in recommending it to the public.

SHELDON SMITH, Superintendent.

NEWCASTLE MANUFACTURING CO.

Newark, January 14, 1850.

The works being on an extensive scale, all orders are executed with dispatch.

President of the Newcastle Manuf. Co.

ANDREW C. GRAY.
