INDEX TO THE TRANSACTIONS AND JOURNAL OF THE NEW ENGLAND WATER WORKS ASSOCIATION

TRANSACTIONS, 1883 TO 1885, JOURNAL VOLUMES I TO LXXIV

1886 TO 1960

Section 1. 1882-1950

Section 2. 1950-1960

FOREWORD

It was thought more practical to bring the Journal Index up to date by reproducing the 1950 Index as it was and adding a separate section for the period from 1950 to 1960, binding the two sections together. So there is no change in Section 1. In Section 2, the Index follows in general the same plan as Section 1, no new titles have been added but some old titles have been dropped or combined.

The Subject Index contains a classification of papers, topical discussions, reports of technical committees and specifications and standards of water works materials, equipment and structures. Cross references are limited to topics rather than papers. A few papers not related to water works matters are classified as "Miscellaneous."

The Author Index lists all papers published under an author's name, long and obscure titles being reworded.

Proceedings of meetings including reports of officers and standing non-technical committees, book reviews, presidential addresses unless confined to a specific technical subject are not indexed since they appear regularly in each volume.

The volume of the Journal appears in small Roman numerals, the page and year in larger Arabic numerals. The three volumes of Transactions for the three years 1883, 1884 and 1885 are identified by the abbreviation "Trans." The Journal was established in 1886 and the quarterly issues of the first two volumes were paged separately and are identified by interpolating the month of issue between volume and page number. Volumes I to XV began with the Sep-

tember issue, but in order to conform to the calendar year, later volumes were made to begin with the March issue, Volume XV (1900-1901) containing six issues, to permit this change.
